Presenting

Ambient Energy Power Generators (AEPG)

New Technologies from Lotus of Life, LLC

Incredible Business Opportunity

Ambient Energy Power Generators derive energy directly from cosmic energy fields using different materials capable of harvesting and converting that energy into electricity. For example photovoltaic materials convert solar radiation into electricity. Lotus of Life, LLC presents two new AEPG technologies:

(1)PC"Poly-crystal" Ambient Energy Power Generator (PC AEPG)

- Electricity is obtained directly from the specially formed crystals. The kinds of materials are used and the way they are pre-processed prior to crystal formation is the key to the invention.
- Invention also uses the principles of the modern physics of multiple dimensions.
- Poly-crystal Energy project is about 6 years old and has been conducted primarily by Lotus of Life, LLC.
- At the moment a poly-crystal cell (100x100 mm length and 6 mm thickness) can be completely grown within 48 hours. It usually produces around 1.5 volts of electricity although some fraction of that can be measured right at the beginning of crystal formation.

What happened so far

Since the initial discovery of Poly-crystal energy the research has been focused on:

- Improving the power production efficiency
- Improving stability of crystals
- Lowering the cost of materials as well as the cost of production
- At the moment a poly-crystal cell (100x100 mm length and 6 mm thickness) can be completely grown within 48 hours. It usually produces around 1.5 volts of electricity although some fraction of that can be measured right away at the beginning of crystal formation. This has been demonstrated numerous times in front of live audiences.
- We have a cell that has been working under the load without interruption for more than a year.
- A prototype of a power box rated at 6.8 W, which consisted of twenty cells (100x100 mm length and 6 mm thickness) was demonstrated. The prototype was under the load of a fan and LED bulb (5 volts and 1.5 amps).
- A Nuclear Radiation test conducted by the Independent Laboratory produced normal results.
- One of tests conducted by the Independent Laboratory was a short-circuit test. The samples were placed under a short circuit for 24 hours. The results were amazing, as

the samples within 24 hours didn't heat and were still producing power upon circuit break. No battery can withstand a short circuit for such a long time or to produce power upon short circuit break.

- We managed dramatically reduce the cost of materials needed to produce a poly-crystal cell.

(2)SM”Solid Matter” Ambient Energy Power Generator (SM AEPG)

Lotus of Life, LLC is proud to announce the invention of the new solid Ambient Energy Harvesting Material (AEHM) that works on different principles than poly-crystals. The preliminary test results are extremely promising and exceed performance of poly-crystals. Please contact us for more information.

Incredible Business Opportunity

With some additional investment to scale up and scale down our technology we are ready to attack a number of lucrative vertical markets and you can participate in profits:

- Rechargeable batteries: cell phones, note books, other gadgets:
→ imagine no recharge for 1 year or more
\$22 billion market by 2017
- Modular Power Supply units for consumer and industrial application providing off-grid power from a few watts to a number gigawatts.
Market is in hundreds of billion of US dollars. Please use your imagination!

We are looking for the first round of equity investment into the Project Company in the amount of 3.5 million USD.

The funds will be utilized as follows:

- To determine and develop the initial most promising line of products;
- Get to the point of Manufacture Ready with our first line of products;
- Determine the cost of building a manufacturing facility. Preliminary estimate is **10-15 million USD**, to be financed through the 2nd round of financing.
